

HOW TO USE THE PET POO COMPOSTER

THE PROBLEM

Lots of waste from dogs and cats is generally disposed into general waste that goes to landfill sites:

- A dog will dump 185 kilograms of waste per year.
- A cat will dump 30 kilograms of waste per year.

THE SOLUTION

With a few simple items pet waste can be converted into compost for healthy garden soil.

WHAT YOU NEED

1. Rapid Results Pet Poo Composter Kit: This consists of a frame with lid, 1000 hungry worms, bio degradable poo waste collection bags
2. Spades and crow bar, to dig a hole 400mm to 500mm deep; 400mm long and 300mm wide. It may take a while to dig. Great exercise!

3. Collect some shredded paper, shredded cardboard, lawn clippings, hessian, coconut fibre or saw dust to use as covering of pet poo waste.

4. Select a place in the garden that is easy to access for regular deposits of your pet dog and cat poo.

PROCEDURE FOR MAKING COMPOST

1. Insert the Rapid Results frame with lid as supplied in item 1.

2. Place a layer of 20mm of hessian or coconut fibre into the whole base.

3. Add a 20mm layer of lawn clippings or shredded paper or cut up cardboard

4. Place 20mm of poo into hole. Open tied bio degradable bags to allow worms to crawl in and eat. Cover with a layer of shredded paper or sawdust.

5. Place 1000 worms on top of poo

6. Repeat 2, Repeat 3, Repeat 2 and 3 regularly.

7 .Warning: Do not place pet poo into the hole for 2 weeks if you have administered anti-worming medicine to your animal.

MAINTENANCE OF COMPOST

Some water may be sprinkled from time to time to keep the area moist.

Use a spade to gently aerate the whole contents every 4 weeks

When Compost is complete

Once the hole is filled to 100 mm from the top it is time to relocate the frame with lid to another part of the garden to repeat the Procedure.

We recommend that the compost that has been completed be left where it is.
Suggestion add some soil and grow a plant.
